Spent mushroom compost

What is it?

Spent mushroom compost is a bi-product from Meadow Mushrooms which acts as a slow release fertiliser perfect for increasing water retention and improving soil structure.

.....

What's in it?

30% DM, composted wheat straw, composted chicken litter, sphagnum peat, gypsum, lime.

N 2.2-2.8% **P** 0.7-1.1% **S** 3.0-3.8% **K** 1.2-2.0%

.....

Ideal for:

- Arable crops
 - Forage crops
 - Viticulture
 - Turf and pasture
 - Landscaping
-

Clean - all compost is subjected to high temperature sterilisation so is completely free of any weed seeds, pests or diseases.

Consistency of quality and supply guaranteed

Testimonial

Benefits include delivery of essential nutrients in a balanced non chemical form, with the added advantage of keeping the soil healthy to improve soil life, health and water holding capacity. Ideal for lifting base nutrient levels which would take a lot of fertiliser to get the same result.

**- Roger Lasham,
Agronomist, Turley Farms**
