

# Aqua Scout

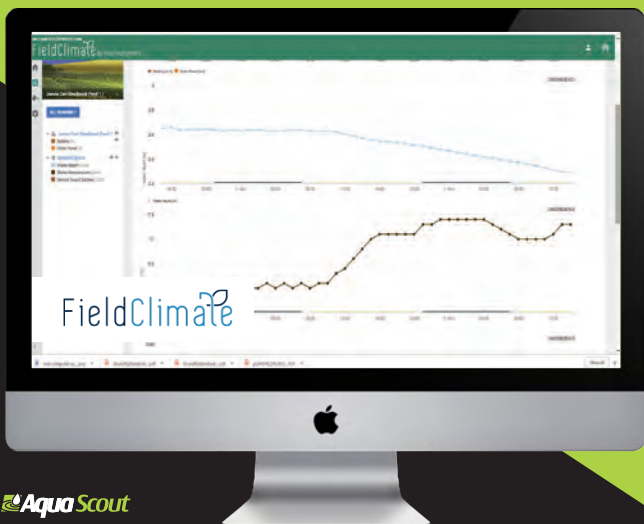

► *Precise depth measurement of liquids in storage tanks and ponds*

**Carrfields**

**Technology**

**Aqua Scout**

► The liquid level sensor is an accurate but cost-effective submersible sensor that can be connected to any of the Carrfields Technology stations.

The sensor has an integrated barometric module, which improves measurement precision and gives a depth accuracy of  $\pm 3$  mm. These sensors are constructed from stainless-steel and can be used in a range of applications such as water tanks, effluent ponds and fertigation containers.

- Robust stainless-steel construction
- Accurate depth sensing in a range of liquids
- Streamlined addition to a Carrfields Technology station

Make informed decisions to **improve your bottom line**
